Hypothetical backtest on a $100,000 account, 2021 to Nov 2026, after costs. Won per $1 lost = total wins divided by total losses. Worst drop = the biggest fall from a peak. Worst day = the biggest one-day loss. 2026 is a part year. Every original strategy passed our 10-step test. The 4 live-book strategies in Titan and Orbit come from our live trading book. The original strategies were judged on 2024–26 data they never saw. Titan's 6 StratForge strategies were tuned on data up to Aug 2025, so only part of 2024–26 is newer data for them.

FAQ

EVERYTHING YOU NEED TO KNOW

1 Is this real?

Every trade in our backtest was verified on real broker data with spreads and commissions. We tested 1,000+ strategies, and the bots run the ones that held up.

2 How are the strategies chosen?

Every original strategy passed our 10-step test. The 4 live-book strategies in Titan and Orbit come from our live trading book.

3 Can I try it risk-free?

Run the bot on a demo account from day 1. See exactly how it trades before risking a cent.

4 What if my account is small?

There is no fixed minimum. Each bot sizes every trade as a small % of your balance. On a very small account your broker's smallest trade size may not fit, so try it on a demo account first.

5 What markets does it trade?

Gold, Nasdaq, S&P 500, EUR/USD, and more — up to 9 markets depending on the bot.

6 Do I get updates?

Yes. Every plan, monthly and pay once, gets all future updates at no extra cost.

7 Can I cancel anytime?

Yes. Monthly plans cancel any time, no lock-in. Pay-once plans never renew.
